
EDUCATION**Master of Science in Business Analytics**, Rady School of Management

12/2026

University of California, San Diego, CA

GPA: 3.84

- Relevant courses: SQL and ETL, Business Analytics Capstone Project, Statistical Natural Language Processing, AI-Assisted Math & Programming, Healthcare Analytics, Fraud Analytics

Bachelor of Arts in Business Administration

06/2024

Zhongnan University of Economics and Law, Wuhan, China

SPECIALIZED SKILLS

- Programming & Analytics: SQL, Python, R, Excel, Tableau, Plotly, data cleaning, exploratory data analysis, dashboarding, A/B testing, customer analytics
- AI / ML: LLMs, NLP, retrieval and reranking, prompt engineering, LightGBM, XGBoost, Random Forest
- Business & Operations: operations analytics, capacity planning, scenario analysis, process optimization, risk analytics, fraud analytics, stakeholder communication

EXPERIENCE**Technical Lead, Global Operations Analytics & Simulation**, UCSD Rady MSBA Capstone

03/2026 - 06/2026

- Led the end-to-end design of a client-facing decision-support framework to help senior stakeholders evaluate capacity planning, backlog reduction, routing tradeoffs, and operational scenarios across a global multi-site service network.
- Built a two-stage optimization and Monte Carlo simulation pipeline in Python to model capacity allocation, processing backlogs, routing tradeoffs, and demand uncertainty under real operational constraints.
- Validated model outputs against confidential client operating data in a secure environment, translating analytical results into executive-ready recommendations for operational planning and implementation.
- Presented final recommendations to senior and executive stakeholders, emphasizing business impact, implementation clarity, and tradeoffs across speed, capacity, and service reliability.

Risk Consulting Intern, KPMG, Shanghai, China

03/2024 - 05/2024

- Analyzed 10+ years of healthcare and medical data using statistical and predictive methods to generate risk insights and support strategic and operational decisions for healthcare clients.
- Conducted fraud and credit risk analyses using Python and Excel, translating complex analytical results into actionable recommendations for client-facing advisory teams.
- Synthesized quantitative analysis and expert interviews with healthcare and life sciences stakeholders into 15+ client-facing presentations, communicating market, operational, and risk insights to non-technical audiences.

PROJECTS**Leader**, LLM & NLP Systems Development, UC San Diego

01/2026 - 03/2026

- Built an LLM-powered question-answering system for 230+ long-form enterprise-style documents, enabling faster knowledge retrieval for operational decision-making and internal analytics workflows.
- Designed a retrieval and reranking pipeline to improve relevance for complex queries, strengthening the reliability of downstream summaries and analytical responses.
- Developed transformer-based text extraction workflows to convert unstructured documents into structured insights for operational decision-making and cross-functional use cases.

Leader, Application Fraud Detection Model, UC San Diego

03/2026 -06/2026

- Built a LightGBM-based identity fraud detection model on 1M financial product applications, engineering velocity, recency, and cross-linkage features from identity attributes.
- Achieved a 58.9% fraud detection rate at a 3% review threshold on out-of-time data, enabling targeted review of high-risk applications in a highly imbalanced fraud environment.
- Estimated \$319M in annual net savings at the recommended 2% review cutoff by balancing prevention impact against false-positive investigation costs.
